-- The invention discloses isolated DNA sequences encoded by polypeptides characterized by the presence in their structure of one or more sequences bearing all or part of one or more T epitopes, and possibly other epitopes, particularly B epitopes, characteristic of proteins resulting from the infectious activity of *P. falciparum* in hepatic cells.--

**Abstract**

The invention discloses isolated DNA sequences encoded by polypeptides characterized by the presence in their structure of one or more sequences bearing all or part of one or more T epitopes, and possibly other epitopes, particularly B epitopes, characteristic of proteins resulting from the infectious activity of *P. falciparum* in hepatic cells.
